WEATHER OF CONCERN

Weather of Concern

- Extreme fire danger (Santa Ana winds and very low humidities) will continue through Friday. The most critical times during this period will be today (improvement through the day) then again Wednesday night through Thursday.
- The National Weather Service has issued Red Flag Warnings for this event covering the following counties: Los Angeles, Ventura, Orange, San Diego, Western Riverside, and Southwestern San Bernardino Counties.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

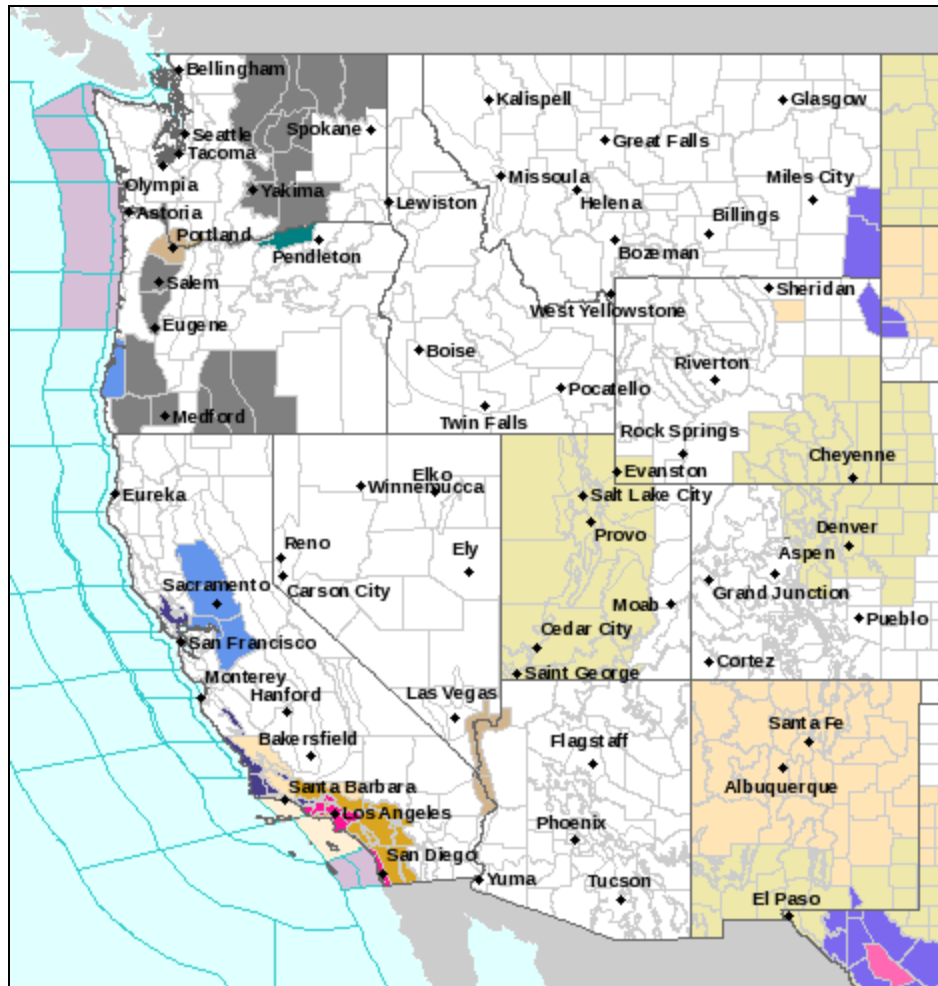

A ridge of high pressure will remain dominant for the next several days. A very stable and persistent pattern will result with only slight day to day sensible weather fluctuations. Humidity values will be quite low for this time of year with readings mainly in the teens across a good portion of the area during the week. Offshore wind flow will even create low readings near the coast through Thursday. Higher mountain areas with snow on the ground will see higher humidity values. Afternoon temperatures will trend above normal through the entire 7 days although overnight low temperatures will fluctuate much more due to the long nighttime hours and dry air mass. Overnight low temperatures will be near to below normal through Thursday morning then then slowly trend higher over time. A significant diurnal or daily 24 hour temperature change is expected and will lead to strong midslope inversions during this ridge scenario. The strong to very strong N to NE wind observed yesterday will gradually lower today and tonight with residual impacts on Wednesday and Thursday. Expect general gusts between 20 to 30 mph favoring portions of the Sacramento valley and foothills as well as the higher ridges found along the coastal range. There is a possibility of a more enhanced N to NE wind flow early next week but not nearly as strong compared the past couple of days.

SOUTHERN CALIFORNIA

Offshore winds of 20 to 40 mph with gusts to 60 mph will surface across much of Southern California through Friday morning as strong surface high pressure remains over the Great Basin. The strongest and most widespread winds will occur on Thursday. Winds will decrease to 15 to 30 mph with gusts to 50 mph Friday afternoon through Saturday morning across the wind prone areas of Southern California. From Saturday afternoon through Monday afternoon there will be just some locally gusty offshore winds across the windiest locations and then moderate offshore winds may return to much of Southern California Monday night through the middle of next week. Across the Sierra and the deserts, there will be local offshore winds of 10 to 20 mph with gusts to 35 mph through the end of this week. Minimum humidity will be mainly in the single digits and there will be very poor nighttime humidity recovery through the middle of next week. Temperatures will remain near normal today, with 40s to low 50s across the mountains and 60s to low 70s in the valleys. Significant warming will take place Wednesday and Thursday as high pressure aloft builds into California from the west. Most locations will be 10 to 15 degrees above normal Thursday through the middle of next week as high pressure aloft sits over the West Coast.
